## The Great Debate!

### Soybean Wax

vs.

### Paraffin Wax

## Soybean Wax

**Just makes sense!**

The benefits of soy wax over paraffin are quite amazing!

Inside you will find a list of benefits you will find pretty impressive!

Before buying another candle, ask your local retailer if they have soy wax. If they don't, ask them why?

## About Soybean Wax Candles

In recent years, candle connoisseurs have been debating the merits of candles made with soy wax compared to paraffin wax.

Paraffin has been the wax of choice for centuries. Made from petroleum byproducts, paraffin was inexpensive and simple to manufacture. That's why virtually all imported candles are paraffin—it's cheap and easy. But paraffin candles tend to emit smoke and soot, causing indoor air pollution.

Clean burning soy candles have many obvious advantages over paraffin, but the technology required to manufacture them has been more challenging and expensive. But now, after years of innovation and effort, American technology has again triumphed!

Swan Creek Candle Co.<sup>®</sup>, has been a pioneer and leader in the field of soy based candles and we can state with confidence that the debate is over:

Soybean Candlelights™ by Swan Creek Candle Co.<sup>®</sup> are clearly superior to any paraffin product now on the market!

## Soybean CandleLights™

by Swan Creek Candle Co.<sup>®</sup>

Listed below are some of the benefits of Swan Creek's great new soy based products:

- They emit little or no soot.
- They produce no carcinogens.
- They do not contain lead.
- Our soy candles are comparable in price to paraffin candles.
- Soybeans are grown in America; much petroleum required for paraffin is imported.
- Soy wax is a renewable resource; petroleum supplies are limited.
- Soy wax is biodegradable and non-toxic.
- Our soy candles have intense fragrance from oils specially formulated for clean burning soybean wax.
- Our soy candles have the highest percentage of fragrance oil possible for soybean wax.
- Our soy candles burn up to 30% longer than paraffin.
- The soft and creamy nature of soybean wax produces a "blooming" or whitening effect in deeper shades of color. Some would say "If it doesn't bloom, it's not soy". Nonetheless, our technology minimizes blooming.
- 100% guarantee.

## Our Story....

Swan Creek Candle Co.<sup>®</sup> was among the first manufacturers in the nation to offer soy based candles. Working with leading American wax companies, we strove to elevate soy wax quality in four key areas:

**Fragrance** - We demanded that our extremely high standards in this area be met. And, through much experimentation and innovation, they were met! Swan Creek continues to produce the best fragranced candles available.

**Color** - A colorless soy candle wasn't good enough. We demanded - and got - a full pallet of pleasing colors.

**Burn times** - Our candles had to last - *and they do!*

**Cost** - Competing with cheap imports isn't easy, but it had to be done. We had to bring you American made soy candles at a good price - *and we have!*

Having successfully met these challenges, we now proudly introduce clean-burning, lead free, intense fragrance Soybean CandleLights™ in a traditional glass jar container.

Please, never leave a burning candle unattended. Keep wicks trimmed to 1/4 inch. Avoid drafts, and keep out of reach of children and pets. We recommend burning candles for 4 to 5 hours at a time, extinguish, cool and relight.

To insure the clean burning nature of our soybean wax, and to add increased safety in our jar candles, we use a high tab wick. This wick will extinguish and leave wax in the bottom of the jar. We offer a full line of electric and tea light wax melters for candle connoisseurs who wish to enjoy every last drop of fragrance.
